RESEARCH INTERESTS

My research focuses primarily on stakeholder analysis and relations and on political behavior in organizations. I am most interested in the intersection of politics, public policy, and organizational behavior. My focus is on natural resource public agencies and nongovernmental organizations. I am most interested in public and non-governmental natural resource organizations, networks, and institutions. I employ quantitative and qualitative research methods including survey research, organization diagnostics, needs assessment, network analysis, social capital analysis, program evaluation, and policy analysis. My research informs environmental leaders, public managers, and network participants how to engage more productively in governance networks.

TEACHING INTERESTS

My teaching focuses on preparing students and professionals to work effectively and efficiently in natural resource and environmental organizations and institutions. My teaching focuses on environmental leadership, inter-and intraorganizational relationships, public management and administration, team development, public policy processes, public affairs, conflict resolution, social networks, emotional intelligence, and social capital. I also teach research methods including but not limited to survey research and qualitative methods.

EXTENSION OUTREACH

I am responsible for helping Connecticut cities and towns' better manage their public trees and forests (urban forest management). My work addresses urban forestry issues specifically and forestry generally focusing on tree wardens, natural resource volunteers and professionals, and municipal and elected officials. This is accomplished through targeted programs, presentations, and publications developed as a result of needs assessments and program evaluations.
